

Amir's Overall Feedback

- All work on styling
- Get the front end to 80 percent of the final look. High priority
- Recommend a frontend framework- start there
- bootstrap vue(amir recommends this/twitterish) and material design(fancier one/googleish)
 - Start with high level layout
 - After setting up layout for every page then move on to buttons etc
- Get core 80 percent working
- Can set up time with amir for debugging framework
- Top 2 priorities- bootstrapping site with front end and bringing out review/metric feature
- Get core stuff done worry about small stuff later

Answers to questions

- What other ways can we improve our app to address potential discrimination like we talked about in the last meeting?
 - Feedback on what metrics we chose to include
 - Choice to go with a subset is a good choice. If you had all of them it would affect the user experience. Get rough approximation of customer experience
 - First draft selection is fine. Could just keep them for final project
 - Strategy for going forward keep these. Instead focus on bring out-focusing on the core value provided
 - Focus majority of effort on polishing main value
 - We chose to weigh all metrics equally, but Arvind brought up a point about different ppl having different preferences of what metrics matter to them - any suggestions on how to address this?
 - Any concerns on how we're calculating scores?
 - To what extent core part of experience?
 - Time by end have this discussion for time being leave as is
 - Summary statistic-top one or two metrics and worst one or worst two
- How should we handle keeping our metrics up to date?
 - Save this as a detail in pacing
 - We can have log running process that sends fresh data to our database
- Should we list the total number of votes next to the score?
 - Good thing to display only give info to users who want it
 - Extra functionality on requests

- tldr - popover are great design tool for simplicity for user who wants more info
